Leading the way in surveillance

CEA Technologies designs, develops and manufactures advanced radar and communications solutions for civil and military application to provide air and surface surveillance, ship self defence and ground based surveillance systems.

The company was founded in 1983 by two ex Royal Australian Navy Officers, Ian Crosier and David Gaul. Since its foundation CEA has grown from a two person consultancy to a company with an annual turnover of $50m and employing 265 staff.

The majority of staff is located at the company's Head Office in Canberra with smaller production, manufacturing and support facilities in Melbourne, Adelaide and Perth. CEA also has a representative office in San Diego providing in-country support to the North American market.

CEA's key products include:
- CEAFAIR - an Active Phased Array Radar system providing advanced multi-function capabilities including simultaneous 3D volume surveillance and Anti Ship Missile Defence (ASMD) for modern warships. CEAFAIR is a fully digital beamforming system that can dynamically adapt and change modes to meet complex environmental and threat scenarios.
- CEAMOUNT™ Active Phased Array Illuminator that is integrated with CEAFAIR to provide target illumination and missile up-link for semi-active homing missiles. CEAMOUNT consists of a stand alone rotating or fixed face phased array illuminator as part of an integrated mast and employs the latest technology to enable flexible and highly effective missile fire control.

This technology will soon be installed on the Royal Australian Navy's (RAN) ANZAC Class Frigates to increase their anti ship missile defence capabilities. The system has recently undergone a regime of rigorous land and sea based demonstrations and has operated to a high standard on all occasions.

HMARS Perth is currently alongside at the Australian Marine Complex in Henderson, Western Australia and is the first of eight ships to be refitted with an extensive package of combat system upgrades. The refit is designed to significantly enhance its ASMD capability under Project SEA 1448 Phase 2.

CEA and its staff have been extensively recognized in the fields of business, engineering and export. Some of the awards afforded to the company are:

- 1991 Australian Small Business of the Year Award – Non-Manufacturing Category Winner
- 1994 ACT Export Awards Small to Medium Manufacturers Award Winner and Exporter of the Year
- 1998 Ian Crosier, Clunes Ross National Science and Technology Award for outstanding contribution to the advancement of radar technology.
- 2000 ACT Chief Minister's Export Awards, Small to Medium Manufacturer's Award Winner
- 2003 David Gaul, Entrepreneur of the Year Award
- 2005 ACT Chief Minister's Export Awards, Information & Communications Award Winner, Australian Engineering Excellence Awards Winner
- 2006 ACT Chief Minister's Exporter's Hall of Fame
- 2010 David Gaul, Australian Export Hero 2009/2010, Tom Green, ACT & National Australian Industry Defence Network Young Achiever of the Year

CEA's president and co-founder, David Gaul recently received the prestigious 2009/10 Australian Export Hero Award from the Australian Institute of Export. This award recognises Mr Gaul's outstanding contribution to building Australia's position and performance in international trade. Another recent accolade for CEA personnel was received in March 2010 when Electronics Engineer Tom Green was announced the ACT and Australian Industry Defence Network's National Young Achiever of the year.
