CEA TECHNOLOGIES RECOGNISED AT ADM AWARDS DINNER

The 2011 Essington Lewis Trophy was presented last night at the Australian Defence Magazine (ADM) Awards Dinner to the Anti-Ship Missile Defence (ASMD) Project Office in collaboration with industry partners BAE Systems, Saab Systems and CEA Technologies.

The trophy is awarded annually in recognition of outstanding teamwork and project management between a major industry partner and the Defence Materiel Organisation (DMO) Project Team.

Working collaboratively to improve the anti-ship missile defence of the Royal Australian Navy’s fleet of ANZAC Class Frigates, the ASMD team was also announced as the winner of the ‘Major Project’ category award.

In announcing the winners, the Minister for Defence Materiel Senator the Hon Kim Carr said “These companies have demonstrated high levels of capability, cooperation and excellence in project management and worked effectively to achieve operational release of the system on HMAS Perth.”

CEA Technologies received further recognition when one of the company’s Adelaide-based Mechanical Engineers, Dugald Harland was announced as the winner of the “Australian Industry & Defence Network (AIDN) Young Achiever’s Award” for his contribution towards developing a three-dimensional radar.

This is the third “AIDN Young Achievers Award” that has been presented to a CEA Engineer in the last four years and is testament to the importance that the company places on nurturing and developing its in-house talent.
